Exam Preparation: Essential Tips for Success

Understanding the Exam Structure

Before diving into preparations, it's vital to know the **structure** of your exams. Different subjects have different formats – *multiple choice*, *written responses*, or *practical applications*. Knowing what to expect helps you tailor your study strategies effectively.

Effective Study Techniques

Successful exam preparation involves various **study techniques**. Here are some that can enhance your learning:

- **Active Recall:** Test yourself on the material rather than just reading it. Quizzing yourself can reinforce your memory.
- **Spaced Repetition:** Review material over spaced intervals. This technique helps solidify your understanding.
- **Summarization:** After studying a topic, try summarizing it in your own words. This practice aids in retention.

Create a Study Schedule

A **study schedule** helps manage your time and ensures you cover all topics before the exam date. Break down subjects into manageable sections and allocate specific days for each. *Consistency* is key!

Utilizing Study Groups

Joining a **study group** can be extremely beneficial. Discussing topics with peers can bring new insights and make studying more engaging. Remember to stay focused to avoid distractions!

Practice with Previous Exam Papers

Solving **previous exam papers** can familiarize you with the format and types of questions

that usually appear. It can also help you manage time during the exam by simulating real conditions. For additional resources, check out [this link](#).

Staying Calm and Confident

Exam **anxiety** is common, but it can be managed. Practice relaxation techniques, such as *deep breathing* or *meditation*, to keep your mind calm. **Confidence** comes from preparation and a positive mindset.

Exam Day Tips

On the day of the exam, ensure you:

- Have a **good breakfast** to fuel your brain.
- Arrive early to avoid last-minute stress.
- Read all instructions carefully before starting.

Wrap-Up

Exams can be challenging, but with the right **preparation** and techniques, you can enhance your performance and achieve the results you desire. Remember, it's not just about hard work; *working smart* is equally important. Good luck! For more preparation tips, visit [this helpful resource](#).

Real Exam Questions 2025

Below given questions are for demo purposes only. **The full version** is up-to-date and contains actual questions and answers.

Why Choose CertKillers?

Actual Exam Questions: We provide real exam questions updated regularly.

Exam Dumps: Downloadable PDFs with comprehensive questions and answers.

Weekly Live updates: Study Material questions and answers - Live updates.

Practice Tests: Practice tests and VCE PDF to assess your readiness.

Multi-Lingual Support: Full Version products available for download in all popular languages.

Success Guarantee: Pass your exam on the first attempt or get a refund.

Up-To-Date Test Questions: Up-to-Date Test Prep Questions that cover 2025 syllabus.

Instant Download: Instant download after successful payment.

Version: 4.0

Question: 1

You are planning to configure Multi-Factor Authentication (MFA) for your CyberArk Privilege Cloud Shared Service. What are the available authentication methods?

A. LDAR RADIUS. SAML OpenID Connect (OIDC)

B. Windows. PKI. RADIUS. CyberArk, LDAP. SAML. OpenID Connect (OIDC)

C. Privilege Cloud Shared Services fully utilize CyberArk Identity and its MFA options.

D. Only RADIUS can be used to achieve MFA across all components, such as PSM for RDP and PSM for SSH.

Answer: B

Explanation:

In CyberArk Privilege Cloud, Multi-Factor Authentication (MFA) can be configured to enhance security by requiring multiple methods of authentication from independent categories of credentials to verify the user's identity. The available authentication methods include:

Windows Authentication: Leverages the user's Windows credentials.

PKI (Public Key Infrastructure): Utilizes certificates to authenticate.

RADIUS (Remote Authentication Dial-In User Service): A networking protocol that provides centralized Authentication, Authorization, and Accounting management.

CyberArk: Uses CyberArk's own authentication methods.

LDAP (Lightweight Directory Access Protocol): Protocol for accessing and maintaining distributed

directory information services.

SAML (Security Assertion Markup Language): An open standard that allows identity providers to pass authorization credentials to service providers.

OpenID Connect (OIDC): An authentication layer on top of OAuth 2.0, an authorization framework.

Reference for this can be found in the CyberArk Privilege Cloud documentation, which details the integration and setup of MFA using these methods.

Question: 2

When installing the first CPM within Privilege Cloud using the Connector Management Agent, what should you set the Installation Mode to in the CPM section?

A. Active

B. Passive

C. Default

D. Primary

Answer: A

Explanation:

When installing the first CyberArk Privilege Management (CPM) instance in the Privilege Cloud using the Connector Management Agent, the installation mode should be set to "Active". This configuration sets the CPM to be actively involved in password management and task processing without being in a standby or passive mode. Here are the step-by-step details:

Download the Connector Management Agent: Obtain the installer from the CyberArk Marketplace or your installation kit.

Run the Installer: Start the setup and select the CPM component to install.

Choose Installation Mode: When prompted, select "Active" as the installation mode. This sets up the CPM as the primary node responsible for handling password management operations.

This setup ensures that the CPM is immediately active and capable of handling requests without

waiting for manual intervention or failover.

Reference: CyberArk's official documentation provides guidance on setting up the CPM, where it specifies the modes and their purposes.

Question: 3

CyberArk User Neil is trying to connect to the Target Linux server 192.168.1.164 using a domain user ACME\linuxuser01 on domain acme.corp using PSM for SSH server

192.168.65.145.

What is the correct syntax?

A. ssh neil@linuxuser01:acme.corp@192.168.1.164@192.168.65.145

B. ssh neil@linuxuser01#acme.corp@192.168.1.164@192.168.65.145

C. sshneil@linuxuser01@192.168.1.164@192.168.65.145

D. ssh neil@linuxuser01@acme.corp@192.168.1.164@192.168.65.145

Answer: B

Explanation:

In CyberArk Privilege Cloud, when connecting to a target server using the Privileged Session Manager (PSM) for SSH, the correct syntax for the SSH command includes the following format: ssh neil@linuxuser01#acme.corp@192.168.1.164@192.168.65.145. This syntax breaks down as follows:

neil: The CyberArk username.

linuxuser01#acme.corp: The domain user on the target Linux server, formatted as username#domain.

192.168.1.164: The IP address of the target Linux server.

192.168.65.145: The IP address of the PSM for SSH server.

This specific format ensures that the CyberArk Privileged Access Manager correctly interprets and routes the connection through the PSM for SSH to the intended target server.

Question: 4

After a scripted installation has successfully installed the PSM, which post-installation task is performed?

A. The screen saver for the PSM local users is disabled.

B. A new group called PSMShadowUsers is created.

C. The PSMAdminConnect user password is reset.

D. Remote desktop services are installed.

Answer: A

Explanation:

After the successful scripted installation of the Privileged Session Manager (PSM), one of the post-installation tasks is to disable the screen saver for the PSM local users. This is done to ensure that the PSMConnect and PSMAdminConnect users, which are created during the installation process, do not have a screen saver activated that could interfere with the operation of the PSM.

Reference:

CyberArk documentation on PSM post-installation tasks1.

CyberArk documentation on disabling the screen saver for PSM local users

Question: 5

Which tool configures the user object that will be used during the installation of the PSM for SSH component?

A. CreateUserPass

B. CreateCredFile

C. ConfigureCredFile

D. ConfigureUserPass

Answer: B

Explanation:

The tool used to configure the user object for the installation of the PSM for SSH component is CreateCredFile. This tool is responsible for creating a credentials file that stores the necessary user details required during the installation process, ensuring secure and correct authentication.
