

## Understanding Hybrid Cloud Monitoring

**Hybrid cloud monitoring** is essential for examining how well your systems perform across different environments. It enables you to ensure that applications running on the cloud are performing optimally. Key tools help you gather important metrics and evaluate the overall health of your hybrid cloud setup.

## Exploring Cloud Observability Tools

**Cloud observability tools** offer a comprehensive view of your cloud's performance. These tools allow you to analyze *logs*, *metrics*, and *traces*. By using observability tools, you can improve your response to issues, leading to a better user experience. For further details, visit [this link](#).

## The Importance of Network Performance Monitoring

Effective **network performance monitoring** is crucial for identifying issues promptly. With the rise of hybrid and multi-cloud environments, monitoring network performance ensures that data travels efficiently without lag or interruptions, thus maintaining smooth operations across platforms.

## Benefits of Hybrid IT Monitoring

**Hybrid IT monitoring** combines both on-premise and cloud environments. This allows organizations to manage their resources effectively. With hybrid monitoring, you can instantly identify problems, reducing downtime and enhancing productivity.

## Ensuring Multi-Cloud Visibility

In today's interconnected world, **multi-cloud visibility** helps organizations manage multiple services without losing sight of overall performance. By having visibility across different cloud

services, you can make informed decisions that positively impact your operations.

## Real-Time Cloud Analytics

**Real-time cloud analytics** provide immediate insights into performance issues. With real-time data, you can quickly react to incidents, improve service reliability, and optimize resource usage across your hybrid cloud.

## Tips for Passing Your Hybrid Cloud Exam

To excel in your hybrid cloud exam, focus your studies on understanding key concepts and tools. Engage with practice tests, explore hands-on labs, and connect with study groups. The mix of practical experience and theoretical knowledge is vital for passing. You may also find useful resources at [this resource](#).

## Guidelines for Efficient Cloud Resource Management

**Resource management** is critical in a hybrid environment. Regularly audit your resource usage, optimize costs, and ensure compliance with regulations. Effective resource management not only eases operations but also strengthens your exam knowledge.

## Key Areas to Focus On

- **Architecture:** Understand hybrid cloud architecture and how it integrates with existing infrastructures.
- **Security:** Learn about best practices in securing cloud resources.
- **Compliance:** Familiarize yourself with the compliance standards that apply to cloud services.

## Final Thoughts

Preparing for the hybrid cloud exam can be daunting, but embracing these topics will aid your understanding and performance. Focus your studies on monitoring tools, network performance, and resource management for a solid foundation.

# Real Exam Questions 2025

Below given questions are for demo purposes only. **The full version** is up-to-date and contains actual questions and answers.

## Why Choose CertKillers?

**Actual Exam Questions:** We provide real exam questions updated regularly.

**Exam Dumps:** Downloadable PDFs with comprehensive questions and answers.

**Weekly Live updates:** Study Material questions and answers – Live updates.

**Practice Tests:** Practice tests and VCE PDF to assess your readiness.

**Multi-Lingual Support:** Full Version products available for download in all popular languages.

**Success Guarantee:** Pass your exam on the first attempt or get a refund.

**Up-To-Date Test Questions:** Up-to-Date Test Prep Questions that cover 2025 syllabus.

**Instant Download:** Instant download after successful payment.

# Version: 4.0

---

**Question: 1**

---

Which three of the following actions are native log entry actions? (Choose three.)

- A. add a tag to the log entry
- B. continue rule processing but do not save
- C. halt further rule processing for the log entry
- D. send an email notification

---

**Answer: A, B, C**

---

---

**Question: 2**

---

If a NetFlow collector service is showing a “down” status, which two of the following steps are possible troubleshooting options? (Choose two.)

- A. Confirm the database connection is up and server has free resources.
- B. Delete and re-add NetFlow collector service.
- C. Start or restart SolarWinds’ collector service.
- D. Start or restart SolarWinds’ NetFlow service from Orion service manager.

---

**Answer: A, D**

---

---

**Question: 3**

---

What is the minimum amount of RAM required for setting up log collection in hybrid cloud observability?

- A. 4 GB
- B. GB
- C. 16 GB
- D. 32 GB

---

**Answer: C**

---

---

**Question: 4**

---

A universal device poller (UDP) was created on the main polling engine to collect CPU temperature for routers polled by the main polling engine and switches polled by the additional polling engine. It is noted

that statistics from the switches are missing.  
What is the likely cause of the missing statistics?

- A. routers are not monitored on the additional polling engine
- B. switches are not monitored in the additional polling engine
- C. UDPs are tied to polling engine on which they are hosted
- D. UDPs do not work with additional polling engines

---

**Answer: C**

---

---

**Question: 5**

---

A probe is to be built to test connections to Office 365 from two different locations. How would this be accomplished?

- A. Create a probe, duplicate it, and change the source agent to the agent in another location.
- B. Create both probes on hybrid cloud observability (HCO) server and designate each location.
- C. Create two probes and assign each to an agent in each location.
- D. Create two probes and assign each to an agent in one location.

---

**Answer: C**

---
